leetcode.com/u/ronnie0524

SUMMARY

Information Technology undergraduate with strong C/C++ fundamentals and hands-on experience in performance-focused systems programming, machine learning pipelines, full-stack development, and AI agent architecture. Built a C++ spatial layout engine optimized for throughput, an offline ML ranking pipeline, and a vision-LLM compliance system with anti-hallucination safeguards. Proficient in C/C++, Python, JavaScript, and SQL, with practical experience in Firebase, PostgreSQL, GitHub OAuth, Linux, and Hugging Face. CS50x graduate and HackerRank Gold Badge holder in C/C++.

EDUCATION

Chaitanya Bharathi Institute of Technology (CBIT), Hyderabad, India *Aug 2025 – Present*

Bachelor of Engineering, Information Technology | Expected Graduation: May 2029

CGPA: 8.68 / 10 (1st Year; 2nd Year in progress)

EXPERIENCE

AI Engineering Intern, FschoolAI — *San Francisco, CA / Remote September 2026 – Present*

- Collaborate directly with founding leadership to engineer features across the full application stack.
- Build and iterate on conversational AI study agents that support students with real-time academic workflows.
- Engineered a RAG-based pipeline that ingests custom study plans and transforms them into structured infographic summaries.
- Overhauled frontend UI/UX workflows, resolving key user-experience bottlenecks and improving interaction speed.

TECHNICAL SKILLS

Languages: C++, C, Python, JavaScript, HTML, CSS, SQL

ML & Data: Sentence-Transformers, Hugging Face, NumPy, Pandas, Llama 3.1, RAG Pipelines, Vision-LLM Extraction (Groq/Qwen), OCR (Tesseract)

Frameworks & Infra: Express.js, Node.js, FastAPI, Firebase, PostgreSQL, Supabase, GitHub OAuth

Tools: Git, GitHub, Linux, GCC, VS Code

PROJECTS

Candidate Ranker — AI Hiring Pipeline | *Python, Sentence-Transformers, Hugging Face*

Hack2Skill RedrobAI Hackathon | github.com/ronaksarda/candidate-ranker

- Built a solo, offline AI candidate-ranking pipeline that scores 100,000 synthetic applicants against a job description in under five minutes on a single CPU with 16 GB RAM, without GPU or cloud dependency.
- Designed a three-stage funnel: keyword pre-filtering to the top 3,000 candidates, semantic matching with a locally hosted MiniLM embedding model, and a composite score using semantic match (50%), explicit skills (30%), and behavioral signals (20%).
- Added a plausibility check to flag potentially fabricated candidate histories.

GitSpace — Web Visualization Tool | *JavaScript, Node/Express, PostgreSQL, C++*

github.com/ronaksarda/GitSpace

- Built a full-stack web app rendering GitHub user and repository data on an interactive 2D map (HTML5 Canvas), with a C++17 spatial layout engine and JS fallback maintaining 60 FPS without WebGL, backed by an Express/Node.js API and PostgreSQL, deployed on Render.
- Resolved core layout bottlenecks, raising tested capacity from 2,500 to 80,000+ repositories (roughly 10,000 simulated users) in local load testing on a single machine.

LabelSure AI — Legal Metrology Compliance System | *Python, FastAPI, Groq Vision LLM, Tesseract OCR*

Smart India Hackathon (SIH) | github.com/ronaksarda/SIH-project

- Built an automated compliance checker for Indian Legal Metrology (Packaged Commodities) Rules, 2011, auditing product labels from images or live e-commerce listings against 14+ statutory requirements.
- Designed a hybrid anti-hallucination pipeline running a vision LLM and local OCR in parallel, cross-validating extracted fields (MRP, batch number, net quantity) against OCR token evidence before accepting legally binding data.
- Implemented a deterministic rules engine codified from the actual Gazette notification, plus a human-in-the-loop officer review workspace and automated PDF/DOCX report generation.

LEADERSHIP & EXTRACURRICULAR

Coordinator / Organizer, HackIndia Spark11, CBIT

- Ran event inauguration and on-ground team support for a 36-hour hackathon with 2,500+ participants across 550 registered teams, of which 68 teams advanced to compete.

Coordinator, Smart India Hackathon (SIH) Internal Hackathon, CBIT

- Co-organized CBIT's internal SIH round with the HICON club; curated ideathon problem statements and hosted opening and closing ceremonies, serving 400+ teams and 2,100+ students.

CERTIFICATIONS

- Microsoft Applied Skills — Get Started Developing Agents in Microsoft Foundry
- Google Gemini Certificate
- Claude Academy — AI Fluency and MCP Certificate
- CS50x — Introduction to Computer Science (Harvard, via edX)
- Google Cloud Skill Badges (34 earned via Credly), including Engineer AI Agents with Agent Development Kit (ADK), Orchestrate Multi-agent Workflows with Gemini Enterprise, Deploy Multi-Agent Architectures, and Prompt Design in Vertex AI

ACHIEVEMENTS

- Google Cloud Facilitator, 2026
- TS EAPCET 2025: Rank 3007 | CBIT COSC HackWeek: Top 7 of 800+ participants
- LeetCode: 300+ problems solved, Top 18% ranking
- HackerRank Gold Badges: C, C++ | HackerRank Orchestrate: Ranked #329/1,773 for an AI agent (June 2026)
- CBIT Open Source Community: Certificate of Merit, 30-hour Git & GitHub workshop
- Languages: English (Fluent), Hindi (Fluent)
