SUMMARY

Information Technology undergraduate with C/C++ fundamentals and hands-on work in full-stack development, machine learning pipelines and LLM-based applications. Currently building the MVP of an AI study platform with a team of 8.

EXPERIENCE

FschoolAI

Sep 2026 to Present

Founding AI Engineering Intern | San Francisco, CA (Remote) | TypeScript, React, Supabase

- Lead MVP delivery for an AI study platform, setting priorities for a team of 8 while building its tutor, rooms and courses.
- Built the tutor reply path: streaming, model-tier routing and failover across providers, so a single provider outage no longer breaks a student's session.
- Built study rooms with a live whiteboard where the AI draws and writes, with one validation layer for every AI board action across typed, streamed and voice input.
- Shipped a Course Maker that turns a Canvas syllabus into a full course, and a 12-question onboarding interview saved to student memory to personalize the first lesson.

PROJECTS

GitSpace | JavaScript, Node.js, Express, PostgreSQL, C++ | github.com/ronaksarda/GitSpace

- Built a web app that draws GitHub users and repositories on an interactive 2D map, with a C++17 layout engine and a JavaScript fallback that holds 60 FPS; deployed on Render.
- Fixed layout bottlenecks and raised tested capacity from 2,500 to 80,000+ repositories in local load tests.

Candidate Ranker | Python, Sentence-Transformers | Hack2Skill RedrobAI Hackathon |

github.com/ronaksarda/candidate-ranker

- Built a solo, offline pipeline that scores 100,000 synthetic applicants against a job description in under five minutes on one CPU with 16 GB RAM.
- Used a three-stage funnel: keyword filter to 3,000 candidates, MiniLM semantic matching, then a weighted score (semantic 50%, skills 30%, behavior 20%).

LabelSure AI | Python, FastAPI, Tesseract OCR | Smart India Hackathon | github.com/ronaksarda/SIH-project

- Built a checker that audits product labels against 14+ requirements of India's Legal Metrology (Packaged Commodities) Rules, 2011.
- Ran a vision LLM and OCR in parallel and cross-checked key fields (MRP, batch number, net quantity) before accepting them.

EDUCATION

Chaitanya Bharathi Institute of Technology (CBIT)

Aug 2025 to May 2029 (expected)

B.E. Information Technology | Hyderabad, India | CGPA: 8.68 / 10 (first year)

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C++, C, Python, HTML, CSS, SQL

Frameworks and Databases: React, Node.js, Express.js, FastAPI, PostgreSQL, Supabase, Firebase

ML and Data: Hugging Face, Sentence-Transformers, NumPy, Pandas, OCR (Tesseract), RAG

Tools: Git, GitHub, Linux, GCC, VS Code

LEADERSHIP

Organizer, HackIndia Spark11, CBIT

- Ran the inauguration and on-ground team support for a 36-hour hackathon with 2,500+ participants and 550 teams.

Coordinator, Smart India Hackathon Internal Round, CBIT

- Co-organized the round for 400+ teams and 2,100+ students; curated problem statements and hosted ceremonies.

CERTIFICATIONS

- Google Cloud Skill Badges (34 earned), including Agent Development Kit and Vertex AI prompt design
- Microsoft Applied Skills: Get Started Developing Agents in Microsoft Foundry
- Claude Academy: AI Fluency and MCP Certificate
- CS50x: Introduction to Computer Science (Harvard, via edX)

ACHIEVEMENTS

- ECSoc '26: ranked 138 of 13,000+ | HackerRank Orchestrate: ranked 329 of 1,773 (June 2026)
- CBIT COSC HackWeek: Top 7 of 800+ | LeetCode: 300+ solved, top 18% | HackerRank Gold Badges: C and C++
